

Add-on display kit to TEC controllers

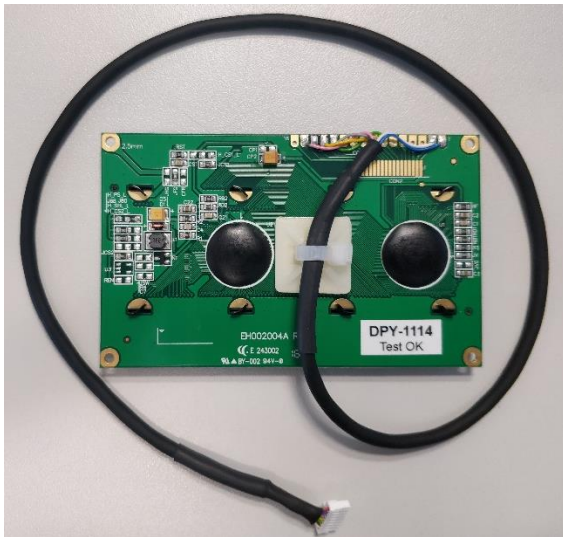

The DPY-1114 is an add-on display kit for TEC Family Peltier controllers.

From the TEC Service Software it is possible to choose the information to be displayed, e.g. temperature, voltage, current and status.

This ready-to-use kit including a cable and connector is particularly suitable for stand-alone operation of single or dual channel controller setups.

The DPY-1114 status display kit is supported from firmware v4.10 and upwards, configuration information is provided in the TEC-Family user manual.
